Subject	Analytical Data Verification Groundwater, Leachate and Surface Water Sampling Events Brooks Road Landfill Cayuga, Ontario March to November 2021		

1. Introduction

This document details a reduced validation of analytical results for groundwater, leachate and surface water samples collected from the Brooks Road Landfill Site in Cayuga, Ontario from March to November 2021. The samples were submitted to ALS Canada Ltd. (ALS) located in Waterloo, Ontario. A sample collection and analysis summary is presented in Table 1. A summary of the analytical methodology is presented in Table 2.

Standard GHD report deliverables were submitted by the laboratory. The final results and supporting quality assurance/quality control (QA/QC) data were assessed. Evaluation of the data was based on information obtained from the chain of custody forms, finished report forms, method blank data, duplicate data, recovery data from surrogate spikes/laboratory control samples (LCS)/matrix spikes (MS).

The QA/QC criteria by which these data have been assessed are outlined in the analytical methods referenced in Table 3 and applicable guidance from the documents entitled:

1. "USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review", United States Environmental Protection Agency (USEPA) 540/R-99-008, September 2016.
2. "USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review", USEPA 540/R-94-013, September 2016.

Items 1 and 2 will subsequently be referred to as the “Guidelines” in this Memorandum.

2. Sample Holding Time and Preservation

The sample holding time criteria for the analyses are summarized in Table 2. Sample chain of custody documents and analytical reports were used to determine sample holding times. Most samples were prepared and analyzed within the required holding times. Results obtained outside of the recommended holding time have been qualified as estimated (See Table 3).

All samples were properly preserved and delivered on ice and received by the laboratory at the required temperature (<10°C).

3. Laboratory Method Blank Analyses

Method blanks are prepared from a purified matrix and analyzed with investigative samples to determine the existence and magnitude of sample contamination introduced during the analytical procedures.

For this study, laboratory method blanks were analyzed at a minimum frequency of 1 per 20 investigative samples and/or 1 per analytical batch.

All method blank results were non-detect, indicating that laboratory contamination was not a factor for this investigation.

4. Surrogate Spike Recoveries

In accordance with the methods employed, all samples, blanks, and QC samples analyzed for organics are spiked with surrogate compounds prior to sample extraction and/or analysis. Surrogate recoveries provide a means to evaluate the effects of laboratory performance on individual sample matrices.

All samples submitted for volatile organic compound (VOC) and polycyclic aromatic hydrocarbon (PAHs) determinations were spiked with the appropriate number of surrogate compounds prior to sample analysis.

Surrogate recoveries were assessed against laboratory control limits. All surrogate recoveries were within the laboratory control limits.

5. Laboratory Control Sample Analyses

LCS are prepared and analyzed as samples to assess the analytical efficiencies of the methods employed, independent of sample matrix effects.

For this study, LCS were analyzed at a minimum frequency of one per 20 investigative samples and/or one per analytical batch.

Organic Analyses

The LCS contained all compounds of interest. All LCS recoveries were within the laboratory control limits, demonstrating acceptable analytical accuracy.

Inorganic Analyses

The LCS contained all compounds of interest. LCS recoveries were assessed per the "Guidelines". All LCS recoveries were within the control limits, demonstrating acceptable analytical accuracy.

6. Matrix Spike Analyses

To evaluate the effects of sample matrices on the extraction or digestion process, measurement procedures, and accuracy of a particular analysis, samples are spiked with a known concentration of the analyte of concern and analyzed as MS samples. If the original sample concentration is significantly greater than the spike concentration, the recovery is not assessed.

The MS samples were spiked with the analytes of interest, and the results were evaluated using the "Guidelines". All percent recoveries were within the control limits, demonstrating acceptable analytical accuracy.

7. Duplicate Sample Analyses

Analytical precision is evaluated based on the analysis of laboratory duplicate samples. For this study, duplicate samples were prepared and analyzed by the laboratory. The laboratory performed additional site-specific duplicate analyses internally. The relative percent differences (RPDs) associated with these duplicate samples must be less than 20 percent for water samples. If the reported concentration in either the investigative sample or its duplicate is less than five times the reporting limit (RL), the evaluation criteria is a difference of one times the RL value for water samples. All duplicate analyses performed were acceptable, demonstrating acceptable analytical precision.

8. Hardness Calculated from Total Calcium and Magnesium Concentrations

Hardness results were flagged by the laboratory because the values were calculated using total calcium and magnesium concentrations. The associated sample results have been qualified as estimated as the results may be biased high (see Table 4).

9. Ion Abundance Ratio

One chrysene result was flagged by the laboratory because the ion abundance ratio did not meet acceptance criteria. The associated sample result has been qualified as estimated as the result is considered an estimated maximum concentration (see Table 5).

10. Field QA/QC Samples

The field QA/QC consisted of two field blanks and nine field duplicate sample sets.

Field Blank Sample Analysis

To evaluate contamination sample collection, transportation, storage, and analytical activities, two field blanks were collected and submitted "blind" to the laboratory for analyses as outlined in Table 1. Most field blank results were non-detect for the compounds of interest. Various metals and general chemistry parameters were detected in the field blanks. Associated sample concentrations that were similar to the blank concentrations were qualified as non-detect or estimated (see Table 6). The remaining associated concentrations were not qualified as results were either non-detect or greater than ten times the blank value.

Field Duplicate Sample Analysis

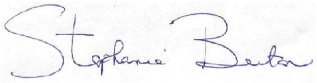
To assess the analytical and sampling protocol precision, nine field duplicate sample sets were collected and submitted "blind" to the laboratory, as specified in Table 1. The RPDs associated with these duplicate samples must be less than 50 percent for water samples. If the reported concentration in either the investigative sample or its duplicate is less than five times the RL, the evaluation criteria is a difference of one times the RL value for water samples.

Most field duplicate results were within acceptable agreement, demonstrating acceptable sampling and analytical precision. Results which showed variability have been qualified as estimated (see Table 7).

11. Conclusion

Based on the assessment detailed in the foregoing, the data are acceptable with the specific qualifications noted herein.

Regards



Stephanie Berton

Analytical Method and Holding Time Criteria
Groundwater, Leachate and Surface Water Sampling Events
Brooks Road Landfill
Cayuga, Ontario
March to November 2021

Parameters	Methodology [1]	Holding Time Criteria[2] Water (days)
Hardness	Calculation	NA
pH	SM 4500H+	28 days
Total Kjeldahl Nitrogen	SM 4500-N	28 days
Anions (Nitrite-N, Nitrate-N)	SM4110B	7 days
Anions (Sulphate, Chloride)	SM4110B	28 days
Alkalinity	SM 2320B	14 days
Ammonia-N	SM 4500NH3	28 days
Conductivity	SM 2510B	30 days
Total Dissolved Solids	SM 2540C	7 days
Total Suspended Solids	SM 2540D - Gravimetric	7 days
Total Phosphorus	SM 4500PD	28 days
Biological Oxygen Demand	SM5210B	4 days[3]
Chemical Oxygen Demand	SM 5220B	28 days
Dissolved Organic Carbon	SM 5310C	3 days unpreserved/28 days preserved
Metals, total and dissolved	EPA 200.8	60 days
Mercury, dissolved	SW-846 7470	28 days
Volatile Organic Compounds	SW846 8260	14 days
Polycyclic Aromatic Hydrocarbons	SW846 8270	14 days
Phenols	SM 5530D	7 days unpreserved/28 days preserved

Notes:

(1) Methods referenced from the following:
SW846 - "Test Method for Evaluating Solid Waste Physical/Chemical Methods", EPA, November 1986 with promulgated updates
SM - Standard Methods for the Examination of Water and Wastewater", 21st Ed., APHA, September 2005
EPA - "Methods for Chemical Analysis of Water and Wastes", EPA 600/4 79 020, Revised March 1983

(2) Holding times differing from those defined in the indicated methodology were obtained from the O. Reg. 153 Analytical Protocols

N - Nitrogen

4 days[3] - 4 days from sample collection to incubation

NA - Not Applicable

Notes:

1 Average median background concentrations are based on groundwater quality reported at wells MW1B-07, OW3B-07 and OW9B-06 between 2004 and 2011.
2 Where a parameter was analyzed for but was not detected at or above the Method Detection Limit (MDL), a value of half the MDL was assumed.
3 Highest reported concentration in former waste disposal area (LW1-92, LW2-92, OW4B-91, and OW6B-92) between 2001 and 2006.
4 Where no ODWS criteria exists, the generation of the RUC values were developed using Table 2 of the Soil, Groundwater and Sediment Standards for Use under Part XV.1 of the Evironmental Protection Act, March 2004 (Part XV.1 Standards)
5 A value of Zero was used to calculate the RUC for PAHs and VOCs contrary to published standard RUC development guidelines, as requested by MOE in correspondence dated May 20, 2007.

Notes:

1 A value with a '<' indicates the parameter was analyzed for but not detected at or above the method detection limit.

2 A '-' indicates the parameter was not applicable.

3 RUC is Reasonable Use Criteria

1.7 indicates that parameter concentration exceeds the respective RUC.

Notes:

1 A value with a '<' indicates the parameter was analyzed for but not detected at or above the method detection limit.

2 A '-' indicates the parameter was not applicable.

3 RUC is Reasonable Use Criteria

1.7 indicates that parameter concentration exceeds the respective RUC.

Ethylbenzene	µg/L	0	1800	AO	2.4	NV	NV	1.20
Toluene	µg/L	0	100	AO	24	NV	NV	12.00

Notes:

1 Average median background concentrations are based on groundwater quality reported at wells MW1A-07, OW3A-07, and OW9A-06 between 2004 and 2011.

2 Where a parameter was analyzed for but was not detected at or above the Method Detection Limit (MDL), a value of half the MDL was assumed.

3 Highest reported concentration in former waste disposal area (LW1-92, LW2-92, OW4B-91, and OW6B-92 between 2001 and 2006.

4 Where no ODWS criteria exists, the generation of the RUC values were developed using Table 2 of the Soil, Groundwater and Sediment Standards for Use under Part XV.1 of the Evironmental Protection Act, March 2004 (Part XV.1 Standards)

5 A value of Zero was used to calculate the RUC for PAHs and VOCs contrary to published standard RUC development guildelines, as requested by MOE in correspondence dated May 20, 2007

Notes:

1 A value with a '<' indicates the parameter was analyzed for but not detected at or above the method detection limit.

2 A '-' indicates the parameter was not applicable.

3 RUC is Reasonable Use Criteria

1.7 indicates that parameter concentration exceeds the respective RUC.

Notes:

1 A value with a '<' indicates the parameter was analyzed for but not detected at or above the method detection limit.

2 A '-' indicates the parameter was not applicable.

3 RUC is Reasonable Use Criteria

1.7 indicates that parameter concentration exceeds the respective RUC.

Report Information - reports to be sent to:
1. Name: Matt Welsh
Email: MattHenriwelsh@genivar.com
2. Name: Bailey Walters
Email: Bailey.Walters@genivar.com

Report Format
☐ Single Sample per page
☑ Multiple Samples per page
☐ Results by fax

Turnaround Time (TAT) Required*
Regular TAT:
☑ 5 to 7 Working Days
Rush TAT: (please provide prior notification)
Rush Surcharges Apply
☐ 3 to 5 Working Days
☐ 2 Working Days
☐ 1 Working Day
OR
DATE REQUIRED (Rush surcharges may apply):
*TAT is exclusive of weekends and statutory holidays

Regulatory Requirements
☐ Regulation 153 Table ____ (Indicate one) ☐ Ind/Com ☐ Res/Park ☐ Agriculture
Soil Texture (check one) ☐ Coarse ☐ Med/Fine
☐ Sewer Use Region ____ (Indicate one) ☐ Sanitary ☐ Storm
☐ Regulation 558
☐ CCME
☑ Other (indicate) OWS.
☐ Prov. Water Quality Objectives (PWQO)
☐ Nutrient Management Act (NMA)

Is this a drinking water sample (potable water intended for human consumption)? ☐ Yes ☐ No (If "Yes" please use the Drinking Water Chain of Custody Record)

TRACE ORGANICS REVIEWED BY: Jacky Takeuchi, BScH (Chem Eng), BSc (Bio), C.Chem, Laboratory Manager

WATER ANALYSIS REVIEWED BY: Mike Muneswar, BSc (Chem), Senior Inorganic Analyst

DATE REPORTED: Jul 18, 2011

PAGES (INCLUDING COVER): 19

VERSION*: 2

Should you require any information regarding this analysis please contact your client services representative at (905) 712-5100

*NOTES

VERSION 2:Report revised on December 1st, 2011 to include the Groundwater General Chemistry parameters for sample MW2D-07 (2527286).

All samples will be disposed of within 30 days following analysis. Please contact the lab if you require additional sample storage time.

Report Information - reports to be sent to:
1. Name: Matt Welsh
Email: Matthew.welsh@genivar.com
2. Name: Bailey Walters
Email: bailey.walters@genivar.com

Regulatory Requirements
☐ Regulation 153 Table ____ (Indicate one) ☐ Ind/Com ☐ Res/Park ☐ Agriculture
Soil Texture (check one) ☐ Coarse ☐ Med/Fine
☐ Sewer Use Region ____ (Indicate one) ☐ Sanitary ☐ Storm
☐ Regulation 558
☐ CCME
☑ Other (indicate) ODWQS
☐ Prov. Water Quality Objectives (PWQO)
☐ Nutrient Management Act (NMA)

Is this a drinking water sample (potable water intended for human consumption)? ☐ Yes ☐ No (If "Yes" please use the Drinking Water Chain of Custody Record)

Report Format
☐ Single Sample per page
☒ Multiple Samples per page
☐ Results by fax

Turnaround Time (TAT) Required*
Regular TAT:
☑ 5 to 7 Working Days
Rush TAT: (please provide prior notification)
Rush Surcharges Apply
☐ 3 to 5 Working Days
☐ 2 Working Days
☐ 1 Working Day
OR
DATE REQUIRED (Rush surcharges may apply):
*TAT is exclusive of weekends and statutory holidays

Leachate VOCs (water)

DATE SAMPLED: Jul 04, 2011 | DATE RECEIVED: Jul 05, 2011 | DATE REPORTED: Jul 14, 2011 | SAMPLE TYPE: Water

Parameter	Unit	G / S	RDL	Leachate 2521423
Styrene	µg/L		0.40	<0.40
Tetrachloroethylene	µg/L	30	0.80	<0.80
Toluene	µg/L	(24)	0.80	41
trans- 1,2-dichloroethylene	µg/L		0.80	<0.80
trans-1,3-Dichloropropene	µg/L		1.20	<1.20
Trichloroethylene	µg/L	5	0.80	<0.80
Trichlorofluoromethane (FREON 11)	µg/L		1.60	<1.60
Trihalomethanes (Total)	µg/L	100	2.0	<2.0
Vinyl Chloride	µg/L	2	0.68	<0.68
o-Xylene	µg/L		0.40	1.5
m & p-Xylene	µg/L		0.80	4.0
Xylene Mixture (Total)	µg/L	(300)	0.80	5.5
Surrogate	**Unit**	**Acceptable Limits**		
Toluene-d8	% Recovery	60-130		84
4-Bromofluorobenzene	% Recovery	70-130		96

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to O.Reg.169/03

2521423 Dilution factor= 4
The sample was diluted because it was foamy. The reporting detection limit has been corrected for the dilution factor used.

TRACE ORGANICS REVIEWED BY: Jacky Takeuchi, BScH (Chem Eng), BSc (Bio), C.Chem, Laboratory Manager

WATER ANALYSIS REVIEWED BY: Mike Muneswar, BSc (Chem), Senior Inorganic Analyst

DATE REPORTED: Oct 04, 2011

PAGES (INCLUDING COVER): 13

VERSION*: 1

Should you require any information regarding this analysis please contact your client services representative at (905) 712 5100, or at 1-800-856-6261

*NOTES

All samples will be disposed of within 30 days following analysis. Please contact the lab if you require additional sample storage time.

s53- Leachate Volatile Organic Compounds in Water

DATE SAMPLED: Sep 26, 2011 | DATE RECEIVED: Sep 27, 2011 | DATE REPORTED: Sep 30, 2011 | SAMPLE TYPE: Water

Parameter	Unit	G / S	RDL	Leachate 2743178
Vinyl Chloride	µg/L	600	1.70	<1.70
Methylene Chloride	µg/L	100	3.00	<3.00
Benzene	µg/L	100	2.00	<2.00
Toluene	µg/L	0.8	2.00	13
Ethylbenzene	µg/L	8	1.00	<1.00
1,4-Dichlorobenzene	µg/L	4	1.00	<1.00
Surrogate	**Unit**	**Acceptable Limits**		
Toluene-d8	% Recovery	60-130		75
4-Bromofluorobenzene	% Recovery	70-130		87

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to PWQO.

2743178 Dilution factor= 10
The sample was diluted because it was foamy. The reporting detection limit has been corrected for the dilution factor used.

Project: 111-53338-00 PO: 111-53338-00 · 0064012 100
AGAT Quotation #: 11-312
Please note, if quotation number is not provided, client will be billed full price for analysis.

Regulatory Requirements:
☐ Regulation 153/09 (reg. 511 Amend.)
Table ____ (Indicate one)
☐ Ind/Com ☐ Res/Park ☐ Agriculture
Soil Texture (check one) ☐ Coarse ☐ Fine
☐ Sewer Use
Region ____ (Indicate one)
☐ Sanitary ☐ Storm
☐ Regulation 558 ☐ CCME ☐ Other (specify)
☑ Prov. Water Quality Objectives (PWQO) ☐ None

Turnaround Time Required (TAT) Required*
Regular TAT
☐ 5 to 7 Working Days
Rush TAT (please provide prior notification)
Rush Surcharges Apply
☑ 3 Working Days ☐ 2 Working Days ☐ 1 Working Day
OR
Date Required (Rush surcharges may apply): ____
*TAT is exclusive of weekends and statutory holidays

Invoice To:
Same: Yes ☑ No ☐

Regulatory Requirements
☐ Regulation 153 Table ____ (Indicate one) ☐ Ind/Com ☐ Res/Park ☐ Agriculture
☐ Sewer Use Region ____ (Indicate one) ☐ Sanitary ☐ Storm
☐ Regulation 558 ☐ CCME ☐ Other (indicate) ____
Soil Texture (check one) ☐ Coarse ☐ Med/Fine
☑ Prov. Water Quality Objectives (PWQO)
☐ Nutrient Management Act (NMA)

Is this a drinking water sample (potable water intended for human consumption)? ☐ Yes ☐ No (If Yes, please use the Drinking Water Chain of Custody Record)

Report Format
☐ Single Sample per page
☑ Multiple Samples per page
☐ Results by fax

Turnaround Time (TAT) Required*
Regular TAT:
☑ 5 to 7 Working Days
Rush TAT: (please provide prior notification)
Rush Surcharges Apply
☐ 3 to 5 Working Days
☐ 2 Working Days
☐ 1 Working Day
OR
DATE REQUIRED (Rush surcharges may apply):
*TAT is exclusive of weekends and statutory holidays

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to PWQO(ug/L)

2908589 Dilution factor= 2
The sample was diluted because it was foamy. The reporting detection limit has been corrected for the dilution factor used.

2908645 Dilution factor= 2
The sample was diluted because it was foamy. The reporting detection limit has been corrected for the dilution factor used.

2908683-2908711 Dilution factor= 2
The sample was diluted because it was foamy. The reporting detection limit has been corrected for the dilution factor used.

Regulatory Requirements
☐ Regulation 153 Table ___ (Indicate one) ☐ Ind/Com ☐ Res/Park ☐ Agriculture
☐ Sewer Use Region ___ (Indicate one) ☐ Sanitary ☐ Storm
☐ Regulation 558 ☐ CCME ☐ Other (indicate) ___
Soil Texture (check one) ☐ Coarse ☐ Med/Fine
☑ Prov. Water Quality Objectives (PWQO)
☐ Nutrient Management Act (NMA)

Is this a drinking water sample (potable water intended for human consumption)? ☐ Yes ☐ No (If "Yes" please use the Drinking Water Chain of Custody Record)

Report Format
☐ Single Sample per page
☑ Multiple Samples per page
☐ Results by fax

Turnaround Time (TAT) Required*
Regular TAT:
☑ 5 to 7 Working Days
Rush TAT: (please provide prior notification)
Rush Surcharges Apply
☐ 3 to 5 Working Days
☐ 2 Working Days
☑ 1 Working Day See Note
OR
DATE REQUIRED (Rush surcharges may apply):
*TAT is exclusive of weekends and statutory holidays

DATE SAMPLED: Dec 12, 2011 | DATE RECEIVED: Dec 13, 2011 | DATE REPORTED: Dec 16, 2011 | SAMPLE TYPE: Water

Parameter	Unit	G / S	RDL	TDS Pond 3002598
Naphthalene	µg/L		0.12	<0.12
Acenaphthylene	µg/L		0.11	<0.11
Acenaphthene	µg/L		0.10	<0.10
Fluorene	µg/L		0.09	0.10
Phenanthrene	µg/L		0.10	0.13
Anthracene	µg/L		0.05	<0.05
Fluoranthene	µg/L		0.12	<0.12
Pyrene	µg/L		0.05	<0.05
Benzo(a)anthracene	µg/L		0.08	<0.08
Chrysene	µg/L		0.05	<0.05
Benzo(b)fluoranthene	µg/L		0.05	<0.05
Benzo(k)fluoranthene	µg/L		0.05	<0.05
Benzo(a)pyrene	µg/L		0.01	<0.01
Indeno(1,2,3-cd)pyrene	µg/L		0.06	<0.06
Dibenzo(a,h)anthracene	µg/L		0.09	<0.09
Benzo(g,h,i)perylene	µg/L		0.06	<0.06
2-and 1-methyl Napthalene	µg/L		0.20	0.47
Surrogate	**Unit**	**Acceptable Limits**		
Chrysene-d12	%	60-130		71

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard

3002598 Note: The result for Benzo(b)Flouranthene is the total of the Benzo(b)&(j)Flouranthene isomers because the isomers co-elute on the GC column.

AGAT Quotation #: 11-312
Please note, if quotation number is not provided, client will be billed full price for analysis.

Regulatory Requirements:
☐ Regulation 153/09 (reg. 511 Amend.)
Table ____ *Indicate one*
☐ Ind/Com ☐ Res/Park ☐ Agriculture
Soil Texture *(check one)* ☐ Coarse ☐ Fine

☐ Sewer Use
Region ____ *Indicate one*
☐ Sanitary ☐ Storm

☐ Regulation 558 ☐ CCME ☐ Other *(specify)* ____
☐ Prov. Water Quality Objectives (PWQO) ☐ None

Turnaround Time Required (TAT) Required*
Regular TAT
☐ 5 to 7 Working Days
Rush TAT (please provide prior notification)
Rush Surcharges Apply (no surcharge as per agreement)
☑ 3 Working Days
☐ 2 Working Days → except BOD (5-day)
☐ 1 Working Day
OR
Date Required (Rush surcharges may apply): ____
**TAT is exclusive of weekends and statutory holidays*

Invoice To:
Same: Yes ☑ No ☐
Company:

4-Bromofluorobenzene	% Recovery	70-130		88	83
Chrysene-d12	% Recovery	50-130		80	72

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard

2520729-2520735 Dilution factor=
The sample was diluted to keep the target compounds in the calibration range of the instrument and avoid contaminating the Purge and Trap system. The reporting detection limit has been corrected for the dilution factor used.

Regulatory Requirements

☐ Regulation 153 Table ____ (Indicate one) ☐ Ind/Com ☐ Res/Park ☐ Agriculture
Soil Texture (check one) ☐ Coarse ☐ Med/Fine
☐ Sewer Use Region ____ (Indicate one) ☐ Sanitary ☐ Storm
☐ Regulation 558 ☐ CCME ☐ Other (indicate) ____
☑ Prov. Water Quality Objectives (PWQO)
☐ Nutrient Management Act (NMA)

Is this a drinking water sample (potable water intended for human consumption)? ☐ Yes ☐ No (If "Yes" please use the Drinking Water Chain of Custody Record)

Report Format

☐ Single Sample per page
☒ Multiple Samples per page
☐ Results by fax

Turnaround Time (TAT) Required*

Regular TAT:
☑ 5 to 7 Working Days
Rush TAT: (please provide prior notification)
Rush Surcharges Apply
☐ 3 to 5 Working Days
☐ 2 Working Days
☐ 1 Working Day
OR
DATE REQUIRED (Rush surcharges may apply):
*TAT is exclusive of weekends and statutory holidays

Report Format
☐ Single Sample per page
☑ Multiple Samples per page
☐ Results by fax

Turnaround Time (TAT) Required*
Regular TAT:
☑ 5 to 7 Working Days
Rush TAT: (please provide prior notification)
Rush Surcharges Apply
☐ 3 to 5 Working Days
☐ 2 Working Days
☐ 1 Working Day
OR
DATE REQUIRED (Rush surcharges may apply):
*TAT is exclusive of weekends and statutory holidays

Regulatory Requirements
☐ Regulation 153 Table ___ (Indicate one) ☐ Ind/Com ☐ Res/Park ☐ Agriculture
☐ Sewer Use Region ___ (Indicate one) ☐ Sanitary ☐ Storm
☐ Regulation 558 ☐ CCME ☐ Other (indicate) ___
Soil Texture (check one) ☐ Coarse ☐ Med/Fine
☑ Prov. Water Quality Objectives (PWQO)
☐ Nutrient Management Act (NMA)

Is this a drinking water sample (potable water intended for human consumption)? ☐ Yes ☐ No (If "Yes" please use the Drinking Water Chain of Custody Record)

s53 Stormwater (PWQO) - Organics

DATE SAMPLED: Aug 26, 2011 | DATE RECEIVED: Aug 29, 2011 | DATE REPORTED: Sep 02, 2011 | SAMPLE TYPE: Water

Parameter	Unit	G / S	RDL	SWc3 (New Cell) 2658690	SWc4 (Holding Pond) 2658824
Ethylbenzene	µg/L	8	0.10	<0.10	<0.10
Benzo(a)pyrene	µg/L		0.01	<0.01	<0.01
Naphthalene	µg/L	7	0.12	<0.12	<0.12
Surrogate	**Unit**	**Acceptable Limits**			
Toluene-d8	% Recovery	60-130		101	97
4-Bromofluorobenzene	% Recovery	70-130		89	98
Chrysene-d12	% Recovery	50-130		54	70

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to PWQO.

2658690-2658824 Dilution factor=
The sample was diluted to keep the target compounds in the calibration range of the instrument and avoid contaminating the Purge and Trap system. The reporting detection limit has been corrected for the dilution factor used.

TRACE ORGANICS REVIEWED BY: Inga Kuzmina, Analytical Chemist

WATER ANALYSIS REVIEWED BY: Anthony Dapaah, PhD (Chem), Inorganic Lab Manager

DATE REPORTED: Feb 02, 2012

PAGES (INCLUDING COVER): 8

VERSION*: 1

Should you require any information regarding this analysis please contact your client services representative at (905) 712-5100

*NOTES

All samples will be disposed of within 30 days following analysis. Please contact the lab if you require additional sample storage time.

Brooks Landfill PAHs

DATE SAMPLED: Jan 30, 2012 | DATE RECEIVED: Jan 31, 2012 | DATE REPORTED: Feb 02, 2012 | SAMPLE TYPE: Water

Parameter	Unit	G / S	RDL	Cell 2A 3087633	Cell 2A - 2 3087712
Naphthalene	µg/L	7	0.12	0.28	0.29
Pyrene	µg/L		0.05	<0.05	<0.05

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to PWQO.

3087633-3087712 Note: The result for Benzo(b)Flouranthene is the total of the Benzo(b)&(j)Flouranthene isomers because the isomers co-elute on the GC column.

Notes:
All concentrations are in ug/L unless otherwise noted.

(1) Ministry of the Environment (MOE), Ontario Drinking Water Standards (ODWS), June 2003; revised June 2006
(2) Table 2, Ontario Regulation 153/04, March 2004
(3) ALS reports the following results as Benzo(b)fluoranthene, however the results are interpreted as representative of Benzo(b/j)fluoranthene.
NV No value
NA Not Analyzed
U The analyte was analyzed for but not detected above the reported sample quantitation limit.
J The result is an estimated value.
559 Does not meet the applicable ODWS/O.Reg 153/04 criteria
559 U Estimated value does not meet the ODWS/O.Reg 153/04 criteria
<30 Method detection limit does not meet ODWS/O.Reg 153/04 criteria
<30 Result below method detection limit
(a) The sum of F1 and F2 must be below 1000 µg/l
(b) The sum of F1 and F2 must be below 1000 µg/l

Notes:

All concentrations are in ug/L unless otherwise noted.

(1) Ministry of the Environment (MOE), Ontario Drinking Water Standards (ODWS), June 2003; revised June 2006

(2) Table 2, Ontario Regulation 153/04, March 2004

(3) ALS reports the following results as Benzo(b)fluoranthene, however the results are interpreted as representative of Benzo(b/j)fluoranthene.

NV No value

NA Not Analyzed

U The analyte was analyzed for but not detected above the reported sample quantitation limit.

J The result is an estimated value.

559 Does not meet the applicable ODWS/O.Reg 153/04 criteria

559 U Estimated value does not meet the ODWS/O.Reg 153/04 criteria

<30 Method detection limit does not meet ODWS/O.Reg 153/04 criteria

<30 Result below method detection limit

(a) The sum of F1 and F2 must be below 1000 µg/l

(b) The sum of F1 and F2 must be below 1000 µg/l

Notes:
All concentrations are in ug/L unless otherwise noted.

(1) Ministry of the Environment (MOE), Ontario Drinking Water Standards (ODWS), June 2003; revised June 2006
(2) Table 2, Ontario Regulation 153/04, March 2004
(3) ALS reports the following results as Benzo(b)fluoranthene, however the results are interpreted as representative of Benzo(b/j)fluoranthene.
NV No value
NA Not Analyzed
U The analyte was analyzed for but not detected above the reported sample quantitation limit.
J The result is an estimated value.
559 Does not meet the applicable ODWS/O.Reg 153/04 criteria
559 U Estimated value does not meet the ODWS/O.Reg 153/04 criteria
<30 Method detection limit does not meet ODWS/O.Reg 153/04 criteria
<30 Result below method detection limit
(a) The sum of F1 and F2 must be below 1000 µg/l
(b) The sum of F1 and F2 must be below 1000 µg/l

(2) Table 2, Ontario Regulation 153/04, March 2004
(3) ALS reports the following results as Benzo(b)fluoranthene, however the results are interpreted as representative of Benzo(b/j)fluoranthene.
NV No value
NA Not Analyzed
U The analyte was analyzed for but not detected above the reported sample quantitation limit.
J The result is an estimated value.
559 Does not meet the applicable ODWS/O.Reg 153/04 criteria
559 U Estimated value does not meet the ODWS/O.Reg 153/04 criteria
<30 Method detection limit does not meet ODWS/O.Reg 153/04 criteria
<30 Result below method detection limit
(a) The sum of F1 and F2 must be below 1000 µg/l
(b) The sum of F1 and F2 must be below 1000 µg/l

Notes:

All concentrations are in ug/L unless otherwise noted.

(1) Ministry of the Environment (MOE), Ontario Drinking Water Standards (ODWS), June 2003; revised June 2006

(2) Table 2, Ontario Regulation 153/04, March 2004

(3) Split Sample, analysed by a second laboratory

(4) ALS reports the following results as Benzo(b)fluoranthene, however the results are interpreted as representative of Benzo(b/j)fluoranthene.

NV No value

NA Not Analyzed

U The analyte was analyzed for but not detected above the reported sample quantitation limit.

J The result is an estimated value.

559 Does not meet the applicable ODWS/O.Reg 153/04 criteria

559 U Estimated value does not meet the ODWS/O.Reg 153/04 criteria

<30 Method detection limit does not meet ODWS/O.Reg 153/04 criteria

<30 Result below method detection limit

(a) The sum of F1 and F2 must be below 1000 µg/l

(b) The sum of F1 and F2 must be below 1000 µg/l

Notes:
All concentrations are in ug/L unless otherwise noted.

(1) Ministry of the Environment (MOE), Ontario Drinking Water Standards (ODWS), June 2003; revised June 2006
(2) Table 2, Ontario Regulation 153/04, March 2004
(3) Split Sample, analysed by a second laboratory
(4) ALS reports the following results as Benzo(b)fluoranthene, however the results are interpreted as representative of Benzo(b/j)fluoranthene.

NV No value
NA Not Analyzed
U The analyte was analyzed for but not detected above the reported sample quantitation limit.
J The result is an estimated value.
559 Does not meet the applicable ODWS/O.Reg 153/04 criteria
559 U Estimated value does not meet the ODWS/O.Reg 153/04 criteria
<30 Method detection limit does not meet ODWS/O.Reg 153/04 criteria
<30 Result below method detection limit
(a) The sum of F1 and F2 must be below 1000 µg/1
(b) The sum of F1 and F2 must be below 1000 µg/1

Notes:

All concentrations are in ug/L unless otherwise noted.

(1) Ministry of the Environment (MOE), Ontario Drinking Water Standards (ODWS), June 2003; revised June 2006

(2) Table 2, Ontario Regulation 153/04, March 2004

(3) Split Sample, analysed by a second laboratory

(4) ALS reports the following results as Benzo(b)fluoranthene, however the results are interpreted as representative of Benzo(b/j)fluoranthene.

NV No value

NA Not Analyzed

U The analyte was analyzed for but not detected above the reported sample quantitation limit.

J The result is an estimated value.

559 Does not meet the applicable ODWS/O.Reg 153/04 criteria

559 U Estimated value does not meet the ODWS/O.Reg 153/04 criteria

<30 Method detection limit does not meet ODWS/O.Reg 153/04 criteria

<30 Result below method detection limit

(a) The sum of F1 and F2 must be below 1000 µg/l

(b) The sum of F1 and F2 must be below 1000 µg/l

Notes:

All results and criteria are reported in mg/L, unless otherwise noted

[a] MOE "Water Management Policies Guidlelines Provincial Water Quality Objectives", July 1994 (reprinted Febuary 1999).

[b] If both PWQO and interim PWQO criteria given, PWQO criteria was used to evaluate if there is an exceedance.

* indicates Interim PWQO;

1.5 Does not meet the applicable PWQO criteria

63 U Estimated value does not meet PWQO criteria

<30 Method detection limit does not meet PWQO criteria

<30 Result below method detection limit

NV No value

NA Not analyzed

J Estimated.

U Not present at or above the associated value.

UJ Estimated reporting limit.

\- Not applicable.

[1] PWQO Alkalinity should not be decreased by more than 25% of the natural concentration.

[2] Dissolved Oxygen concentrations should not be less than the values specified and is dependant on cold water biota vs warm water biota.

[3] Total Phosphorus Interim PWQO: To avoid nuisance concentrations of algae in lakes, average total phosphorus concentrations for the ice-free period should not exceed 0.02 mg/L; A high level of protection against aesthetic deterioration will be provided by a total phosphorus concentration for the ice-free period of 0.01 mg/L or less. This should apply to all lakes naturally below this value; Excessive plant growth in rivers and streams should be eliminated at a total phosphorus concentration below 0.03 mg/L.

Notes:

All results and criteria are reported in mg/L, unless otherwise noted

[a] MOE "Water Management Policies Guidlelines Provincial Water Quality Objectives", July 1994 (reprinted Febuary 1999).

[b] If both PWQO and interim PWQO criteria given, PWQO criteria was used to evaluate if there is an exceedance.

* indicates Interim PWQO;

1.5 Does not meet the applicable PWQO criteria

63 U Estimated value does not meet PWQO criteria

<30 Method detection limit does not meet PWQO criteria

<30 Result below method detection limit

NV No value

NA Not analyzed

J Estimated.

U Not present at or above the associated value.

UJ Estimated reporting limit.

\- Not applicable.

[1] PWQO Alkalinity should not be decreased by more than 25% of the natural concentration.

[2] Dissolved Oxygen concentrations should not be less than the values specified and is dependant on cold water biota vs warm water biota.

[3] Total Phosphorus Interim PWQO: To avoid nuisance concentrations of algae in lakes, average total phosphorus concentrations for the ice-free period should not exceed 0.02 mg/L; A high level of protection against aesthetic deterioration will be provided by a total phosphorus concentration for the ice-free period of 0.01 mg/L or less. This should apply to all lakes naturally below this value; Excessive plant growth in rivers and streams should be eliminated at a total phosphorus concentration below 0.03 mg/L.

NA Not analyzed

J Estimated.

U Not present at or above the associated value.

UJ Estimated reporting limit.

\- Not applicable.

[1] PWQO Alkalinity should not be decreased by more than 25% of the natural concentration.

[2] Dissolved Oxygen concentrations should not be less than the values specified and is dependant on cold water biota vs warm water biota.

[3] Total Phosphorus Interim PWQO: To avoid nuisance concentrations of algae in lakes, average total phosphorus concentrations for the ice-free period should not exceed 0.02 mg/L; A high level of protection against aesthetic deterioration will be provided by a total phosphorus concentration for the ice-free period of 0.01 mg/L or less. This should apply to all lakes naturally below this value; Excessive plant growth in rivers and streams should be eliminated at a total phosphorus concentration below 0.03 mg/L.

Notes:
All results and criteria are reported in mg/L, unless otherwise noted

[a] MOE "Water Management Policies Guidlelines Provincial Water Quality Objectives", July 1994 (reprinted Febuary 1999).
[b] If both PWQO and interim PWQO criteria given, PWQO criteria was used to evaluate if there is an exceedance.
* indicates Interim PWQO;
1.5 Does not meet the applicable PWQO criteria
63 U Estimated value does not meet PWQO criteria
<30 Method detection limit does not meet PWQO criteria
<30 Result below method detection limit
J Estimated.
NV No value
NA Not analyzed.
U Not present at or above the associated value.
UJ Estimated reporting limit.
\- Not applicable
[1] Beryllium PWQO dependent upon hardness (mg/L). If hardness <75 then PWQO is 11, if hardness > 75 then PWQO is 1,100.
[3] PWQO for Cr(III) is 0.0089 ug/L and PWQO for Cr(VI) is 0.001 mg/L
[4] Copper interim PWQO is dependent on hardness (mg/L). If hardness is between 0-20 then the interim PWQO is 0.001 If hardness is >20 the interim PWQO is 0.005
[5] Lead PWQO dependent upon alkalinity (mg/L). If alkalinity <20 then PWQO is 0.005, if alkalinity is between 20-40 then PWQO is 0.01, if alkalinity is between 40-80 then PWQO is 0.02 and if alkalinity is above 80 then PWQO is 0.025; The interim PWQO is dependent on hardness (mg/L). If hardness is < 30 the interim PWQO is 0.001, if hardness is between 30-80 then the interim PWQO is 0.003, if hardness is >80 than the interim PWQO is 0.005
[6] Aluminum interm PWQO at pH 6.5-9.0 is 0.075 (mg/L) and at pH 4.5-5.5 is 0.015 (mg/L) in clay-free samples; at pH 5.5-6.5, concentrations in clay-free samples are not permitted

Notes:
All results and criteria are reported in mg/L, unless otherwise noted

(a) MOE "Water Management Policies Guidlelines Provincial Water Quality Objectives", July 1994 (reprinted Febuary 1999).

(b) If both PWQO and interim PWQO criteria given, PWQO criteria was used to evaluate if there is an exceedance.

* indicates Interim PWQO;

1.5 Does not meet the applicable PWQO criteria

63 U Estimated value does not meet PWQO criteria

<30 Method detection limit does not meet PWQO criteria

<30 Result below method detection limit

J Estimated.

NV No value

NA Not analyzed.

U Not present at or above the associated value.

UJ Estimated reporting limit.

\- Not applicable

(1) Beryllium PWQO dependent upon hardness (mg/L). If hardness <75 then PWQO is 11, if hardness > 75 then PWQO is 1,100.

(3) PWQO for Cr(III) is 0.0089 ug/L and PWQO for Cr(VI) is 0.001 mg/L

(4) Copper interim PWQO is dependent on hardness (mg/L). If hardness is between 0-20 then the interim PWQO is 0.001 If hardness is >20 the interim PWQO is 0.005

(5) Lead PWQO dependent upon alkalinity (mg/L). If alkalinity <20 then PWQO is 0.005, if alkalinity is between 20-40 then PWQO is 0.01, if alkalinity is between 40-80 then PWQO is 0.02 and if alkalinity is above 80 then PWQO is 0.025; The interim PWQO is dependent on hardness (mg/L). If hardness is < 30 the interim PWQO is 0.001, if hardness is between 30-80 then the interim PWQO is 0.003, if hardness is >80 than the interim PWQO is 0.005

(6) Aluminum interm PWQO at pH 6.5-9.0 is 0.075 (mg/L) and at pH 4.5-5.5 is 0.015 (mg/L) in clay-free samples; at pH 5.5-6.5, concentrations in clay-free samples are not permitted

Notes:

All results and criteria are reported in ug/L, unless otherwise noted
[a] MOE "Water Management Policies Guidlelines Provincial Water Quality Objectives", July 1994 (reprinted Febuary 1994).
[b] Monitoring data as presented in the 2005 Annual Operations and Monitoring Report, Edwards Landfill Site, (CRA, April 2006)
* indicates Interim PWQO; if both PWQO and interim PWQO criteria given, PWQO criteria was used to evaluate if there is an exceedance.
<30 - Result below method detection limit
NV - No value
NA - Not Analyzed
(1) PWQO Alkalinity should not be decreased by more than 25% of the natural concentration.
(2) Dissolved Oxygen concentrations should not be less than the values specified and is dependant on cold water biota vs warm water biota.

Notes:

(3) Total Phosphorus Interim PWQO: To avoid nuisance concentrations of algae in lakes, average total phosphorus concentrations for the ice-free period should not exceed 20 ug/L; A high level of protection against aesthetic deterioration will be provided by a total phosphorus concentration for the ice-free period of 10 ug/L or less. This should apply to all lakes naturally below this value; Excessive plant growth in rivers and streams should be eliminated at a total phosphorus concentration below 30 ug/L.
(4) Cadmium interim PWQO is dependent on hardness (mg/L). If hardness is between 0-100 then the interim PWQO is 0.1. If hardness is > 100 the interim PWQO is 0.5.
(5) PWQO for Cr(III) is 8.9 ug/L and PWQO for Cr(VI) is 1 ug/L
(6) Lead PWQO dependent upon alkalinity (mg/L). If alkalinity <20 then PWQO is 5.
(7) Two follow-up samples collected January 16, 2007 were non-detect at detection limit of 5 ug/L.
(8) Followup sampling performed March 27, 2007.
(9) Followup sampling performed April 13, 2007.

(1) Ministry of the Environment (MOE), Ontario Drinking Water Standards (ODWS), June 2003, revised June 2006

(2) Table 2, Ontario Regulation 153/04, March 2004

NV No value

NA Not Analyzed

U The analyte was analyzed for but not detected above the reported sample quantitation limit.

J The result is an estimated value.

559 Does not meet the applicable ODWS/O.Reg 153/04 criteria

559 U Estimated value does not meet the ODWS/O.Reg 153/04 criteria

<30 Method detection limit does not meet ODWS/O.Reg 153/04 criteria

<30 Result below method detection limit

(a) The sum of F1 and F2 must be below 1000 ug/l

(b) The sum of F1 and F2 must be below 1000 ug/l

Notes:

All concentrations are in ug/L unless otherwise noted.

(1)	Ministry of the Environment (MOE), Ontario Drinking Water Standards (ODWS), June 2003; revised June 2006
(2)	Table 2, Ontario Regulation 153/04, March 2004.
(3)	Criteria for 1,3-dichloropropene
NV	No value
NA	Not Analyzed
U	The analyte was analyzed for but not detected above the reported sample quantitation limit.
J	The result is an estimated value.
559	Does not meet the applicable ODWS/O.Reg 153/04 criteria
<30	Method detection limit does not meet ODWS/O.Reg 153/04 criteria
<30	Result below method detection limit
(a)	value applies to fine and medium textured soils

Notes:

(1) Ministry of the Environment (MOE), Ontario Drinking Water Standards (ODWS), June 2003; revised June 2006
(2) Table 2, Ontario Regulation 153/04, March 2004
(3) Applicable at point of consumption.
- No Value/Not Analyzed
U The analyte was analyzed for but not detected above the reported sample quantitation limit.
J The result is an estimated value.
559 Does not meet the applicable ODWS/O.Reg 153/04 criteria
559 U Estimated value does not meet the ODWS/O.Reg 153/04 criteria
<30 Method detection limit does not meet ODWS/O.Reg 153/04 criteria
<30 Result below method detection limit

Notes:

(1) Ministry of the Environment (MOE), Ontario Drinking Water Standards (ODWS), June 2003; revised June 2006
(2) Table 2, Ontario Regulation 153/04, March 2004
(3) Applicable at point of consumption.
- No Value/Not Analyzed
U The analyte was analyzed for but not detected above the reported sample quantitation limit.
J The result is an estimated value.
559 Does not meet the applicable ODWS/O.Reg 153/04 criteria
559 U Estimated value does not meet the ODWS/O.Reg 153/04 criteria
<30 Method detection limit does not meet ODWS/O.Reg 153/04 criteria
<30 Result below method detection limit
